

# The Keys To Success

## Automotive Solutions

### KURT Gage Systems

Designed to measure critical features of automotive components including cylinder blocks, chassis assemblies, lock keys, heads, rotors, pistons and more.

A single gage station can easily measure multiple dimensions saving time and cost.

Measurement time of less than 10 seconds is very common.

KURT Gage Systems are available to measure the features of just about any automotive component or assembly from small to large.

Complete solutions from custom engineered systems to off-the-shelf Industrialized computers and data collection systems. We have an answer for most applications and budgets and welcome your challenge. It's as easy as sending us a print and part.
