

The industry standard

Can Manufacturing Solutions

KurtCan Gage Systems

Designed to measure critical features of Beverage and Food cans.

A single gage station measures multiple can sizes.

Measurement time of less than 10 seconds.

CanGage Systems available to measure the following features:

- Continuous Wall Thickness measurements while the can is rotated against measuring heads
- 1000 readings per second
- Resolution to 10 millionths
- Trim Height and Dome Depth Features
- Trimmed Height measured in multiple locations at one time
- Flange Height and Neck Plug Measurements
- Finished can height, flange width and neck plug diameter
- Can rotation provides neck plug roundness as well as Max/Min readings on height and width

Kurt Data Collection Systems

Includes a fully integrated package for turn-key results

KurtICS – Small footprint Industrialized Computer

KurtUSB – Supports direct gage interface to LVDT, Digital and Analog probes as well as I/O monitoring and control

KurtSPC – Windows based data collection software package
